THE UNOFFICIAL GUIDE TO

COMPUTER SCIENCE @ HARVARD

DESIGNED BY CS50

Haven’t taken CS50 yet?
Visit cs50.net for FAQs.
What is CS?

We like to say that CS teaches you how to think more methodically and how to solve problems more effectively. As such, its lessons are applicable well beyond the boundaries of CS itself.

But CS is also, more generally, the study of information. How do you represent it? With what methods (aka algorithms) can you process it?

Perhaps the most liberal answer, though, is that CS “has no exclusive domain of its own, and that its importance comes from the problems to which it is applied.” And therein lies the excitement. CS empowers you with tools and ideas that can be applied to practically any domain of interest to you, both in college and beyond.

What is CS not?

Contrary to popular belief, CS is not really about programming, even though you do learn how to program. Programming languages are tools that Computer Scientists use or create in order to solve problems of interest to them.

How can I get a secondary in CS?

Take any four courses numbered 50 or higher. See page 9 for popular study cards. See Computer Science under Secondary Fields in the Handbook for Students.

How do I concentrate in CS?

Take at least two of CS50, CS51, and CS61; take CS121 and another “theory” course; take four technical electives; and take Math 21a and Math 21b. Plus take any of Math 1a, Math 1b, and CS20 as needed for background. See page 8 for popular study cards. See Computer Science under Fields of Concentration in the Handbook for Students.

Can I change my concentration to CS?

Yes, so long as you still have time to satisfy the requirements. Even David J. Malan ’99, who now teaches CS50, didn’t take his first CS course until his sophomore year, when he switched from Government to CS.

Does CS require a thesis?

No, not for non-Honors or Honors, but for High Honors and Highest Honors, it’s expected. See Computer Science under Fields of Concentration in the Handbook for Students.

Is a thesis just a big program?

No, a thesis is a research paper. You might end up writing programs in order to evaluate your ideas, but those programs are ordinarily means to an end, not an end in themselves.
How do I graduate with Honors in CS?
Take six technical electives instead of four and have a concentration GPA in the top half of your class. See Computer Science under Fields of Concentration in the Handbook for Students.

How do I graduate with High Honors in CS?
High Honors are decided by faculty vote. You must ordinarily write an “excellent thesis” to be considered. See Computer Science under Fields of Concentration in the Handbook for Students.

How do I graduate with Highest Honors in CS?
Highest Honors are decided by faculty vote. You must ordinarily write an “outstanding thesis” to be considered. See Computer Science under Fields of Concentration in the Handbook for Students.

Is CS part of Mind, Brain, and Behavior?

Do any CS courses count for Gen Ed?
Yes! To satisfy Empirical & Mathematical Reasoning, take CS1, CS20, CS50, or CS171. (Note that CS1 does not count toward a concentration or secondary in CS.) To satisfy Culture & Belief, take CS105.

Should I study CS even if I don’t want to be a programmer?
Yes! CS concentrators head off in all sorts of directions after graduation. See Figure 1 for titles that alumni since 1984 now hold. See Figure 2 for fields in which alumni since 1984 can now be found.

Should I activate Advanced Standing and get a fourth-year master’s degree in CS?
Maybe! If you are eligible for Advanced Standing and think you could handle eight (mostly) 200-level CS courses, it’s a great opportunity. Your bachelor’s degree doesn’t even need to be in CS, so long as you can still satisfy the prerequisites for the 200-level courses. See Other Academic Opportunities in the Handbook for Students.

Can I do a joint concentration between CS and another field?
Yes, but you probably shouldn’t. Joint concentrations are really for students who want to write a thesis on some research problem in the intersection of two fields. If you simply want to study both fields, it’s generally best to get a secondary or simply take courses in CS or the other field.

Figure 1: Titles that alumni since 1984 now hold.
Should I concentrate or minor in CS even if I don’t want to work in tech?

Yes! CS empowers you to solve problems in all sorts of domains. Here’s where alumni since 1984 can be found:

Can I do research in CS?
Yes! Many CS courses offer opportunities for research, particularly 200-level courses. And you can take CS91r to work one-on-one with faculty. Students and faculty do research in all sorts of areas, including, but not limited to:

- Artificial Intelligence and Computational Linguistics
- Computation and Economics
- Graphics, Visualization, and Imaging
- Human-Computer Interaction
- Information, Systems, and Networks
- Intelligent Systems and Computer Vision
- Languages, Compilers, and Operating Systems
- Multi-Agent Systems
- Privacy and Security
- Theory of Computation

Will everyone in CS know more than me?
No! Contrary to popular belief, not every Computer Scientist has been programming since childhood! In fact, 77% of the students who took CS50 in Fall 2010 had never taken a CS course before. Only 17% had taken one, and only 6% had taken two or more, per Figure 3.

Figure 3: CS50 is most students’ very first course in CS. 77% of the students who took CS50 in Fall 2010 had never taken a CS course before; 17% had taken one; and 6% had taken two or more.
Popular Study Cards for Concentrators

Plenty of other combinations are possible. Graduate-level (200-level) courses are also allowed!

For late converts to CS

- AM21b: Mathematical Methods in the Sciences
- CS20: Discrete Mathematics for Computer Scientists
- CS50: Introduction to Computer Science I
- CS61: Systems Programming and Machine Organization
- CS121: Introduction to Formal Systems and Computation
- CS124: Data Structures and Algorithms
- CS141: Computing Hardware
- CS171: Visualization
- CS179: Design of Usable Interactive Systems
- CS182: Intelligent Machines: Reasoning, Actions, and Plans
- Math 1a: Introduction to Calculus
- Math 1b: Calculus, Series, and Differential Equations

For those with stronger math backgrounds, interested in hard-core systems

- AM21a: Mathematical Methods in the Sciences
- AM21b: Mathematical Methods in the Sciences
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS61: Systems Programming and Machine Organization
- CS121: Introduction to Formal Systems and Computation
- CS124: Data Structures and Algorithms
- CS141: Computing Hardware
- CS143: Computer Networks
- CS152: Programming Languages
- CS161: Operating Systems
- CS165: Information Management
- CS175: Computer Graphics

For budding theorists writing theses

- AM106: Applied Algebra
- AM107: Graph Theory and Combinatorics
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS91r: Supervised Reading and Research
- CS121: Introduction to Formal Systems and Computation
- CS124: Data Structures and Algorithms
- CS141: Computing Hardware
- CS143: Computer Networks
- CS152: Programming Languages
- CS175: Computer Graphics
- CS222: Algorithms at the Ends of the Wire
- Math 25a: Honors Linear Algebra and Real Analysis I
- Math 25b: Honors Linear Algebra and Real Analysis II

For those interested in machine intelligence

- AM21a: Mathematical Methods in the Sciences
- AM21b: Mathematical Methods in the Sciences
- CS20: Discrete Mathematics for Computer Scientists
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS61: Systems Programming and Machine Organization
- CS121: Introduction to Formal Systems and Computation
- CS124: Data Structures and Algorithms
- CS141: Computing Hardware
- CS165: Information Management
- CS182: Intelligent Machines: Reasoning, Actions, and Plans
- CS187: Computational Linguistics
- CS189r: Autonomous Multi-Robot Systems

For those without prior college-level math, interested in human-computer interaction

- AM21a: Mathematical Methods in the Sciences
- AM21b: Mathematical Methods in the Sciences
- CS20: Discrete Mathematics for Computer Scientists
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS61: Systems Programming and Machine Organization
- CS105: Privacy and Technology
- CS121: Introduction to Formal Systems and Computation
- CS124: Data Structures and Algorithms
- CS171: Visualization
- CS179: Design of Usable Interactive Systems
- CS182: Intelligent Machines: Reasoning, Actions, and Plans
- Math 1a: Introduction to Calculus
- Math 1b: Calculus, Series, and Differential Equations
Popular Study Cards for Secondaries

Plenty of other combinations are possible. Graduate-level (200-level) courses are also allowed!

For “those less comfortable”
- CS50: Introduction to Computer Science I
- CS105: Privacy and Technology
- CS171: Visualization
- CS179: Design of Usable Interactive Systems

For “those more comfortable”
- CS51: Introduction to Computer Science II
- CS61: Systems Programming and Machine Organization
- CS121: Introduction to Formal Systems and Computation
- CS161: Operating Systems

For those interested in data
- CS50: Introduction to Computer Science I
- CS124: Data Structures and Algorithms
- CS165: Information Management
- CS171: Visualization

For those interested in economics
- CS51: Introduction to Computer Science II
- CS121: Introduction to Formal Systems and Computation
- CS182: Intelligent Machines: Reasoning, Actions, and Plans
- CS186: Economics and Computation

For those interested in efficiency
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS121: Introduction to Formal Systems and Computation
- CS124: Data Structures and Algorithms

For those interested in graphics
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS171: Visualization
- CS175: Computer Graphics

For those interested in hardware
- CS50: Introduction to Computer Science I
- CS61: Systems Programming and Machine Organization
- CS141: Computing Hardware
- CS148: Design of VLSI Circuits and Systems

For those interested in life sciences
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS124: Data Structures and Algorithms
- CS171: Visualization

For those interested in management
- CS50: Introduction to Computer Science I
- CS105: Privacy and Technology
- CS124: Data Structures and Algorithms
- CS165: Information Management

For those interested in math
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS121: Introduction to Formal Systems and Computation
- CS124: Data Structures and Algorithms

For those interested in networks
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS143: Computer Networks
- CS144r: Networks Design Projects

For those interested in programming languages
- CS51: Introduction to Computer Science II
- CS61: Systems Programming and Machine Organization
- CS152: Programming Languages
- CS153: Compilers

For those interested in robotics
- CS51: Introduction to Computer Science II
- CS121: Introduction to Formal Systems and Computation
- CS182: Intelligent Machines: Reasoning, Actions, and Plans
- CS189r: Autonomous Multi-Robot Systems

For those interested in speech recognition
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS182: Intelligent Machines: Reasoning, Actions, and Plans
- CS187: Computational Linguistics

For those interested in software development
- CS50: Introduction to Computer Science I
- CS51: Introduction to Computer Science II
- CS124: Data Structures and Algorithms
- CS164: Software Engineering for Mobile Devices
Life after 50

You can head off in all sorts of directions after CS50, but here are some popular routes. See Computer Science in the Courses of Instruction for prerequisites.
